Small And Mid-Size Business Leaders Curb Their Enthusiasm Somewhat, But Remain Optimistic About U.S. Economy

October 4, 2017

- PNC Survey shows optimism has shifted significantly to a more moderate level since the spring.
- More than half anticipate increases in sales and profits.
- One in three say it’s harder to hire qualified employees than it was six months to a year ago; leading cause - inadequate skills and experience.
- Majority do not plan to increase employee wages, citing current compensation not affecting hiring or retention.

PITTSBURGH, Oct. 4, 2017 /PRNewswire/ -- Optimism among business owners and leaders remains high, but has shifted significantly to a more moderate level according to the PNC Economic Outlook, a biannual telephone survey of small and medium-sized business owners, which began in 2003.

The share of respondents who described their outlook for the U.S. economy as strongly optimistic dropped from 40 percent to 29 percent, balanced by those with a moderately optimistic outlook rising from 48 percent to 58 percent. Just 12 percent of business owners and leaders expressed pessimism, up slightly from an all-time low of 9 percent in the spring.

"Small businesses are a key source of economic activity and employment, and owners' perceptions can be good indicators of what's to come," said Gus Faucher, chief economist of The PNC Financial Services Group, Inc. "The overall findings from our survey confirm that the U.S. economic expansion, now more than eight years old and the third-longest in U.S. history, will continue into 2018."

Further solidifying the anticipation of continued growth, more than half of business owners and leaders anticipate increases in sales (54 percent) and profits (51 percent) during the next six months, an increase over fall 2016, but a slight drop from post-election highs reported in spring 2017.

Key survey findings include:

**Hiring Under Pressure:** One in three (34 percent) say it's harder to hire qualified employees than it was six months to a year ago. Specifically, manufacturing and construction sectors most frequently cited hiring difficulties. The top challenges in hiring cited were:

- Inadequate skills and experience (44 percent)
- Overall lack of applicants (18 percent)
- Candidates requiring higher compensation than the business owner can afford (9 percent)
When offered as a response for the first time in the survey's history, one in 20 (5 percent) cite issues with candidates’ abilities to pass required controlled substance screening.

“Hiring has become more difficult across all skill levels,” said Faucher. “Organizations even report that they have turned down business because of a lack of workers. That said, the one ongoing problem with the economic expansion remains persistently soft wage growth. Given the low unemployment rate and consistent complaints from firms about the difficulty in finding workers, wage growth should be stronger. Wage growth is likely to pick up as the job market continues to tighten.”

**Wage Watchers:** The proportion of employers anticipating to increase employee compensation continues to be relatively high, with 37 percent expecting to do so, a slight dip from 41 percent in the spring, but still well above the 28 percent from fall 2016. Among the majority (58 percent) who do not anticipate increasing pay, most believe their provided compensation is sufficient – either asserting that their current compensation level isn’t affecting hiring or retention (34 percent), or that the pay is competitive for the industry (32 percent).

**Certainly Uncertain About Policy:** Thirty-six percent of respondents expect policy changes from the new administration and Congress to have a positive impact on their business over the next year if they were to go into effect. One in eight (13 percent) anticipate a negative impact (a small increase over 9 percent in spring 2017), while 40 percent are unsure and 11 percent anticipate no effect.

The PNC Financial Services Group, Inc. (NYSE: PNC) is one of the largest diversified financial services institutions in the United States, organized around its customers and communities for strong relationships and local delivery of retail and business banking including a full range of lending products; specialized services for corporations and government entities, including corporate banking, real estate finance and asset-based lending; wealth management and asset management.
